PORTFOLIO - <https://sujal872.github.io>

OBJECTIVE

Motivated and detail-oriented Computer Science student with Python & Bash languages skills and a growing interest in Cyber Security and SOC operations. Seeking an entry-level SOC Analyst (L1) role to apply knowledge of networking, log analysis, and threat detection while continuously enhancing technical and analytical skills.

WORK/PROJECT EXPERIENCE

Voxify – Media Conversion Web Application (Hackathon Project)

Sep 2025 - Oct 2025

- Developed Voxify, a full-stack media conversion application using React and Flask, enabling seamless conversion between video, audio, text, and speech formats.
- Implemented features including video-to-text transcription, audio-to-text conversion, text to-speech generation, OCR-based image-to-speech, and video trimming functionality.
- Built a responsive frontend using React and integrated backend services with Flask for efficient media processing and API handling.
- Delivered a unified platform allowing users to perform multiple media operations in one place, improving usability and workflow efficiency.

DomainHunter – Domain Information Gathering Tool | [Github](#)

Mar - Apr 2026

- Developed a Python-based domain reconnaissance tool to collect WHOIS, DNS, SSL certificate, and IP intelligence data.
- Implemented Domain Lookup, Reverse IP Lookup, DNS Blacklist Detection, and SSL Certificate Analysis functionalities.
- Automated structured JSON report generation with timestamped scan results for security analysis and documentation.
- Applied networking concepts including DNS, WHOIS, socket programming, and SSL/TLS to support cybersecurity reconnaissance activities.

NetSpecter – Network Scanning & Reconnaissance Tool | [Github](#)

Apr - May 2026

- Developed NetSpecter, a Python-based network reconnaissance tool inspired by Nmap for port scanning and service enumeration.
- Implemented TCP/UDP scanning, banner grabbing, and service detection to identify active hosts and running services.
- Built a multi-threaded scanning engine to improve scan speed and efficiency across multiple ports.
- Added support for custom port selection, verbose output, and scan result logging for streamlined network analysis.
- Strengthened practical knowledge of network protocols, port enumeration, service discovery, and cybersecurity reconnaissance techniques.

TECHNICAL SKILLS

- Languages: Python, Bash
- Security & SIEM Tools: Splunk, Elastic (ELK), Snort, Wireshark, Nmap, Burp Suite
- Development Tools: Git, GitHub, VS Code
- Cyber Security & Networking:
 - TCP/IP, DNS, HTTP/HTTPS
 - Network Traffic Analysis
 - Security Monitoring & Log Analysis
 - Incident Detection & Investigation
 - Reconnaissance & Information Gathering
- Operating Systems : Linux, Windows
- Platforms : TryHackMe

EDUCATION

Bachelor of Computer Applications

Aug 2023 - Jul 2026

- Maa Shakumbhari University
- CGPA : 7.27
- Graduation : 2026

CERTIFICATIONS/COURSES

- Cyber Security with AI (**Internsalla**)
- SOC Level 1 (**TryHackMe**)
- SIEM Tools (Splunk/EDR) (**TryHackMe**)
